

Bacoban

LONG-TERM ANTI-VIRAL-BACTERIAL-FUNGAL COATING

What is Bacoban?

Bacoban is a long-term anti-viral, anti-bacterial and anti-fungal coating which can be applied to any surface via spray, wipe or nebuliser (dry fog machine). Unlike most surface protection products which once applied only last minutes, Bacoban remains active for up to 10 days after application and is resistant to the most common germs and viruses including MRSA, HIV, Hepatitis B&C and Norovirus. Bacoban has been extensively tested to prove its effectiveness.

Applications: Bacoban has been developed not only to protect medical environments such as hospitals and surgeries, but also high multi-user environments such as offices, shopping and entertainment centres and even planes and ships. With a wide range of application methods almost any environment can be protected. The Bacoban Nebuliser (a dry fog atomizer unit) can disinfect a room, vehicle, cabin or office in minutes and as no moisture is released so sensitive equipment and interior fittings do not need to be relocated before application. Bacoban coatings also reduce cleaning time and materials for surfaces as soil and contaminants are easier to clean off.

Certification & Documentation:

- Global Aviation
- Approval Biocompatibility Certificates
- EU Food Safety Approval
- 3rd Party Efficacy Data (SGS)
- Clinical Trials
- Research Papers
- Technical Data Sheets
- Material Safety Data Sheets

Nebuliser

50 Wipes

Bacoban is currently available in three versions from MFStek. A spray-on version, the Nebuliser 1 litre solution which is more concentrated than the spray-on and covers 333 cubic meters per bottle, and the 50 pack tubs of Bacoban infused wipe clothes. Freight is F.O.B. Laval, Quebec. Local customs charges, taxes, etc are also the responsibility of the buyer. May cause eye and skin irritation during application so eye protection and gloves are recommended. See MSDS sheet for full safety details.
