Re: Sigmatek Non-Absorbent coating

Dear Don:

As you are aware, this was our third summer in our condo in Edmonton. We moved in here in the winter of 2013. We love the view from our living room over the River Valley to the south and out our west facing windows, the neighbourhoods of Westmount, Glenora, Crestwood, WestJasper Place, Canora, High Park and points further west.

In the first 2 full years here, 2014 and 2015, our views were sadly marred by speckles of dust-coated water-spots. The spring rains would leave water droplets on the windows and the dust carried by the wind would be trapped in these droplets as they dried. This left dust speckles on our windows and spoilt our view!

This spring we had our window washers apply one coat of Sigmatek Non-Absorbant coating to all our windows after they had been washed. This summer, to our delight we enjoyed an unimpeded view of our fair city! Despite all the rain we had, our windows remained and remains largely clear of water-spots and dust speckles! Thank you for introducing this wonderful product to us!

Sincerely,

Joseph Wu
